

OIL MEN WATCH
MARLAND TEST

Texas, Okla., May 8.—Oil men are closely following developments at the Marland Refining company's test on the Bertha Hickman farm in the northeast quarter of section 26-27-28 in the western part of the Oklahoma reservation north of Muskogee. An oil showing has been found in the Marlandville sand at 549 feet and the well made 100 barrels. Operations were suspended for storage. The new well is within half a mile of the same company's big gas well, which was brought in a year ago, but it is many miles from the nearest oil production and points to a new oil field.

A 200 barrel well has been brought in at Beggs, section 18-19-21 by the Atlantic Petroleum corporation. This is the company's No. 2 on the Drew farm and is flowing from the Dutchman sand. In the southeast quarter of section 24-25-21 the Texas company's No. 11 on the Coleman farm, Beggs district is making a good flow from the Dutchman sand, production unestimated. A 200 barrel well has been brought in on the Horton farm by the Bagby et al interests at 2752 feet.

The No. 4 on the Marshall farm, section 14-15-21 of the Gates Oil company is making 200 barrels at 2609 feet. It is in the Beggs pool. Among the recent completions at Hewitt is the 200 barrel well on the Woodruff farm, section 14-15-21 of the Carter Oil company and the No. 8 on the Noble farm which is flowing 200 barrels.

LITIGATION CASES.

Vernon, Texas, May 8.—The Sigler litigation suit has been settled out of court on a motion of the plaintiffs. Developments will be resumed in that territory at once.

FLOW OF GAS
STILL STEADY

Bald, Tex., May 8.—Operations in Callahan county continue active. Several wells are approaching depths at which production should be found. The Ohio Cities Gas company's No. 3 well is drilling below 2500 feet. The No. 1 continues to make considerable gas at 600 feet.

On the J. L. Woods tract the Transcontinental Petroleum Oil company's well No. 1, is drilling around a depth of 450 feet with excellent indications for production soon. Many visitors daily go to the site. The test is one of interest to operators throughout the field.

The Ohio Cities Gas No. 1 is making 70,000,000 feet of gas daily and has been producing at this rate for several months. This is one of the oldest producers in the field and promises to prove the well a long lived one. The No. 2 on the tract is drilling around 550 feet.

The No. 1 of the Associated Oil company is shut down pending the arrival of the six inch casing. As soon as this arrives and is set in the hole drilling will be resumed to the 450 foot level if necessary. The No. 2 has a fishing job at 400 feet.

A promising showing of oil has been found in the Western Oil and Gas company's well No. 1, Odum at 2250 feet.

A good showing was found in the Simon Heibold, Dyer No. 1, nine miles north of Baird after passing through a 300 foot lime strata. The well is now 245 feet deep.

A showing has been found in the Texas Midland Porewell and Leggett No. 1, ten miles south of Baird, around 1215 feet.

Locations for a well are good at the Benadum and Trees Wood No. 1, two miles northeast of Putnam. Oil showings have appeared in the slush pit with the drill in a sand at 2250 feet.

Irkutsk, Siberia, with a population of 120,000, has had an average of 500 murders a year for decades.

WELL EXTENDS
FIELD AT HOMER

Shreveport, La., May 8.—The Homer field has been extended three eighths of a mile to the southwest by the completion of the Gilliland Oil company's No. 1 Shaw in section 10-11-2. The well is making 500 barrels of oil daily with the drill in the shallow pay.

The Homer Oil company's Nelson No. 2 is in with an initial flow of 1000 barrels. This well is located in section 21-12-19, Red River Parish. The largest completion of the past 10 days in the Northern Louisiana fields in the Wharton No. 5, of the White Oil company in the Claiborne Parish. This well's initial flow was 3000 barrels at 3182 feet.

More than 10,000 barrels of new production has been added during the past week to the Homer field production. Eighty-seven hundred barrels this comes from the northern extension. There were 19 completions in the field.

Seven new wells have been brought in with a total initial production of 77,000,000 feet of gas.

TO DRILL NEW WELL.

Snyder, Texas, May 8.—An early date will be set for the new well to be drilled east of Dunn of the cotton land in the district. Col. W. J. Dunn is the engineer for the test.

1600 BARREL
WELL IS IN

Ranger, Texas, May 8.—A 1600 barrel well has recently been brought in on the L. J. Davis farm four miles northwest of here, by the Prairie Oil and Gas company. The well is 2120 feet. This same concern has a new well on the C. E. Connolly tract in the same district. This well is seven miles northwest of Ranger.

On the Weaver survey, the Coe Oil and Refining company has completed its No. 2. The well is making 1000 barrels of oil and approximately 1,000,000 feet of gas and is situated seven miles northwest of Ranger, a mile south of production. The well proves up a large strip of territory which has for some time been considered promising.

TULAROSA TEST
IS SHOWING GAS

J. L. Stewart, vicepresident of the Southwestern Tularosa Basin Oil and Refining company, said Saturday the company's test well eight miles northwest of Tularosa, N. M., is making a strong showing of gas at 1475 feet.

"The odor of gas is very distinct," Mr. Stewart said, "even through the slush at the top of the well, and when the water has been bailed out the pit is shown to be covered with oil from the first stratum of the well."

"The well recently has been visited by prominent oil men, who, on the strength of the showing, bought leases in the field. The site of the well generally has been recommended as the most desirable location in the Tularosa basin for a test well, and the formations checks exactly with what was expected. There have been no unfavorable conditions."

The well is in section 24, township 11 south, range 8.

SUNSHINE OIL CORPORATION WINS AGAIN IN THE COURTS

Word has been received in El Paso that the verdict in the Trust oil lease case was given in favor of the Sunshine Oil corporation. This makes the second suit this company has won during the past week.

President Alfred Timm has wired the local office of the corporation that conditions at the Laura well are fine. Several oil men, including J. B. Dalrymple and his son, arrived in El Paso Friday from the field and all felt sure that the Laura would prove a good well. Mr. Dalrymple is on his way to Los Angeles and stopped over to call on M. P. Carlock, owner of the Carlock well. Mr. Carlock has been ill for several days but expects to return to the Pecos field early next week.

TO MAKE DEEP TEST.

Dawson, Texas, May 8.—A deep test will be drilled one and a half miles south of Dawson at an early date by the Dawson Development association. The location is on the E. A. Holt tract. The derrick is on the ground and machinery is being hauled to the site.

Mrs. John Gerken will judge the saddle chase and ponies under saddle at the New York horse show this year.

TO DRILL WEST
OF PRESIDIO

Toyah, Texas, May 8.—W. C. Jordan, an attorney of Marfa, who is conducting a drilling campaign on his lease in the Toyah field, announced today that New York capitalists have financed a company to drill a well seven miles west of Presidio, Texas. Drilling will begin in 60 days.

There has been little speculation in leases here. The bulk of the leases are now in first hands. Production is so great, with steadily advancing prices of crude oil, that values cannot long remain at present levels. The conclusion is obvious—now is the time for shrewd investors to buy leases, to get in ahead of the drill, and anticipate big profits. We offer leases of great potential value, owned by us. This is a "hard-boiled" opportunity, shorn of speculative trimmings. Write for prospectus, with maps.
